Each equation also includes a constant term. Standard errors are in parentheses and are robust to correlated errors among students who attended the same institution.

Equations are estimated by WLS and are weighted to make the sample representative of the population of students at the C&B institutions.

* Applicants are matched by the average SAT score (within 25 point intervals) of each school at which they were accepted or rejected. This model includes 1,232 dummy variables representing each set of matched applicants.

** Applicants are matched by the average SAT score of each school at which they were accepted or rejected. This model includes 654 dummy variables representing each set of matched applicants.

*** Applicants are matched by the *Barron's* category of each school at which they were accepted or rejected. This model includes 350 dummy variables representing each set of matched applicants.
