Only students who were accepted by more than one school are included in the sample.

Each equation also includes a constant term. Standard errors are in parentheses, and are robust to correlated errors among students who attended the same institution.

Equations are estimated by WLS; weights are designed to make the sample representative of the population of students at the C&B institutions.

* Applicants are matched by the average SAT score (within 25 point intervals) of each school at which they were accepted and rejected. Model includes 1,079 dummy variables indicating each set of matched applicants.
