

FIGURE 1. MARGINAL VALUE OF TIME

Notes: Applicants chose between two jobs with different hours per week and hourly wages. Each panel shows results from a different choice. The points show the fraction of applicants who chose the longer job at each effective wage. The logit fit is estimated off the individual-level data. In the “40 versus 45 hours” and “45 versus 50 hours” panels, we constrain the intercepts, $\Pr(\mathbf{1}[h_i] = 1 | e_{ih} = 0)$, to values predicted using the estimated intercepts at lower hour treatments, as described in the text.
